Class 10 TIT Sr. Sec. School | 2020

PROFILE

My name is Prince, and I am currently pursuing a B.Tech degree. I have a strong interest in technology, coding, and learning new skills. I always try to keep myself ready for new challenges and love exploring new opportunities for growth.

WORK EXPERIENCE

Chessvanguard.com

First real-world development experience Contributed to the development of the admin dashboard, teacher panel, and other core modules of the website. Worked on both frontend and backend, gaining hands-on experience in full-stack development. Designed and implemented the database structure to efficiently manage user data and course content. Collaborated with the team to ensure smooth functionality and userfriendly interfaces.

Projects

IRCTC Booking Assistant - Chrome Extension

- Developed a Chrome extension to simplify and automate the IRCTC train ticket booking process.
- Implemented a feature to pre-fill passenger details such as name, age, and other essential information to save time during booking.
- Enabled automatic form filling as soon as the booking window opens, reducing manual effort and increasing the chances of successful ticket booking.
- Improved user experience by minimizing errors and speeding up the ticket reservation process.
- Used JavaScript, Chrome Extension APIs, and web automation techniques to build the tool.

Others projects

- I have worked on various personal projects including a Weather App using public APIs, an AI Resume Creator, a To-Do List App, and a static travel website. These projects helped me strengthen my skills in frontend and backend development, API integration, and UI/UX design.
- In the Weather App, I utilized public APIs to fetch real-time weather data and display dynamic information based on user location. The AI Resume Creator incorporates AI-based features to assist users in generating professional resumes with ease. The To-Do List App focuses on task management with features like adding, editing, and deleting tasks, emphasizing clean UI and efficient state management. Lastly, the static travel website demonstrates responsive design principles and effective layout creation using HTML, CSS, and JavaScript.
